

SWB Partridge Block

Supplementary feed for pheasants and partridges

Ingredients:

Crude protein 10.5 %, crude fat 5.5 %, crude fibre 4.9 %, calcium 6.0 %, trace elements

Composition:

Maize, wheat, rye, triticale, molasses, sunflower seeds, shell grit, calcium carbonate, monocalcium phosphate, sodium chloride

Benefits of the Partridge Block:

- Very good acceptance and occupation; keeps animals in their habitat.
- No fattening of the pheasants.
- Permanent intake of minerals supports egg laying.
- Species-appropriate composition.
- Ideal complement to other feeding systems.

Recommended use:

Place the 5 kg SWB Partridge Block on a mat / stone plate protected against ground moisture under the protective roof. The pheasant or partridge will return time and again to get to the very palatable feed, which will turn your pheasants into sedentary game. The quick application and the long feeding period (one block feeds 20 pheasants for approximately four weeks) make for time-saving feeding. High-quality ingredients are mixed to form a hard block to be used with a protective roof.

Sales units:

SWB Partridge Block 5 kg (outer box 4 x 5 kg)

Pallet: 25 outer boxes (100 pieces)

Please observe the current national and international legislation on the feeding of wild game where applicable!
